Isothermal Conduction Calorimetry (ICC) for the determination of heat of hydration of cement: State of Art Report and Recommendations

National foreword

This Published Document is the UK implementation of CEN/TR 16632:2014.

The UK participation in its preparation was entrusted to Technical Committee B/516/12, Sampling and testing.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

**Isothermal Conduction Calorimetry (ICC) for the determination of
heat of hydration of cement: State of Art Report and
Recommendations**

Bestimmung der Hydratationswärme von Zement durch
isotherme Wärmeflusskalorimetrie: Stand der Technik und
Empfehlungen

This Technical Report was approved by CEN on 26 November 2013. It has been drawn up by the Technical Committee CEN/TC 51.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword.....	4
Introduction	5
1 Basic principle and key points of ICC	6
1.1 Basic Principle	6
1.2 Key points of ICC	7
2 Normative references	7
3 Technical data sheets of available calorimeters	7
4 Experimental data	8
5 Calibration	9
5.1 Calibration of isothermal heat conduction calorimeters	9
5.2 Determination of the baseline	11
5.3 Open question.....	11
6 Final remarks.....	12
7 Scope and field of application.....	13
8 Terms and definitions	13
9 Apparatus	14
9.1 General.....	14
9.2 Thermostat	15
9.3 Calorimeter technical parameters.....	15
10 Calibration	16
10.1 General.....	16
10.2 Steady state calibration	17
10.2.1 General.....	17
10.2.2 Calibration coefficient (ϵ).....	17
10.2.3 Time constant (τ).....	17
10.3 Pulse calibration	18
10.3.1 General.....	18
10.3.2 Time constant (τ).....	19
10.4 Determination of the calorimeter parameters.....	19
10.5 Improvement of common calibration procedure.....	19
11 Sample	19
11.1 General.....	19
11.2 Test sample	19
11.3 Reference sample	20
12 Testing procedure.....	20
12.1 General.....	20
12.2 Method A - "External mixing"	20
12.3 Method B - "Internal mixing"	21
12.4 Measurement.....	21
12.5 Calculations.....	21
12.6 Result	22
Annex A (informative) Glossary	23
A.1 Ampoule.....	23
A.2 Ampoule holder.....	23

A.3	Baseline	23
A.4	Calibration coefficient.....	23
A.5	Isothermal.....	23
A.6	Reference	23
A.7	Thermal power	23
	Bibliography.....	24

Foreword

This document (CEN/TR 16632:2014) has been prepared by Technical Committee CEN/TC 51 “Cement and building limes”, the secretariat of which is held by NBN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

It is divided into two sections. The first section is a State of Art Report of the test method based on the collection of the technical data sheets of the calorimeters adopted in the European cement laboratories and also on the collection of the results of several experimental activities. The second section is made of recommendations for the measurement of heat of hydration of cement by ICC. Based on the State of Art Report, this section provides some basic elements of the test procedure with the aim to become a first guide for the laboratories that are currently using ICC or for those laboratories that would start to adopt this method. By using the information and adopting the procedures given in the document it will be possible to compare in a more reliable way both the performances of the different calorimeters and the test results.

Annex A (informative) provides a Glossary.

Introduction

In 2007, CEN/TC 51, through resolution 495, agreed that WG 12/TG 3 investigates the suitability for standardization of the test method based on isothermal conduction calorimetry (ICC). The Task Group 3 has been reactivated and held its first meeting in 2008.

Since no national standard on ICC for the determination of heat of hydration of cement was available, TG 3 started its activity on the item by gathering the available information on recommendations or published scientific papers, inter-laboratory experimental exercises. The available information, collected into a State of Art report, has been analysed and discussed in order to identify those aspects of the test method that can be already considered consolidated as well as those elements that still need further development.

The second step of the activity was the redaction of a Recommendations document including a testing procedure for the measuring of heat of hydration of cement by ICC. The circulation of this document in the laboratory actually involved in ICC testing, would lead to the application of uniform general principles and, therefore, to a better data reproducibility.

In this CEN/TR, the State of Art document and the Recommendations document are reviewed into a single document divided into two parts:

- a) State of art report on the application of ICC for the determination of heat of hydration of cement;
- b) Recommendations for the measurement of Heat of Hydration of Cement by Isothermal Conduction Calorimetry.
