American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword v

9.6.2 Rotodynamic pumps for assessment of applied nozzle loads. 1

9.6.2.0 Scope 1

9.6.2.1 Horizontal end suction pumps (ANSI/ASME B73.1 and B73.3) 1

9.6.2.1.1 Scope 1

9.6.2.1.2 Nomenclature and definitions 1

9.6.2.1.3 Criteria for loading allowances 3

9.6.2.1.4 ANSI/ASME B73.1 pump assessment of applied nozzle loads 5

9.6.2.1.5 ANSI/ASME B73.3 sealless pump assessment of applied nozzle loads 8

9.6.2.1.6 Nozzle load adjustment factors. 8

9.6.2.2 Vertical in-line pumps (ANSI/ASME B73.2) 10

9.6.2.2.1 Scope 10

9.6.2.2.2 Nomenclature and definitions 11

9.6.2.2.3 Criteria for loading allowances 11

9.6.2.2.4 ANSI/ASME B73.2 pump assessment of applied nozzle loads 12

9.6.2.2.5 Temperature and material adjustment factors 14

9.6.2.3 Axially split one- and two-stage pumps (BB1) 15

9.6.2.3.1 Scope 15

9.6.2.3.2 Definitions 15

9.6.2.3.3 Criteria for loading allowances 16

9.6.2.3.4 Axial split case pumps (single-stage double suction and two-stage single suction) assessment of applied loads. 17

9.6.2.4 Vertical turbine short set pumps (VS1 and VS2) 18

9.6.2.4.1 Scope 18

9.6.2.4.2 Definitions 19

9.6.2.4.3 Methodology 19

Appendix A Example assessments of applied nozzle loads – ASME B73.1 pumps 24

Appendix B Example assessments of applied nozzle loads – ASME B73.2 pumps 32

Appendix C Example assessments of applied nozzle loads – axial split case pumps (single-stage double suction and two-stage single suction) 34

Appendix D Example assessments of applied nozzle loads – vertical turbine pumps 35

Appendix E References 37

Figures

9.6.2.1.2.2 — Coordinate system for ASME B73.1 and B73.3 horizontal end suction pumps. 2
9.6.2.1.6.1.1 — Stilt-mounted baseplate 9
9.6.2.2.2.2 — Coordinate system for ASME B73.2 vertical in-line pumps 11
9.6.2.3.2 — Coordinate system for axial split case pumps 16
9.6.2.4.2a — Nozzle loads for above pump base (floor) discharge pumps 20
9.6.2.4.2b — Nozzle loads for below pump base (floor) discharge pumps 21

Tables

9.6.2.1.3.5 — List of material specifications as used in Table 9.6.2.1.6.2.2 4
9.6.2.1.4a — Equation Sets 1 through 5 5
9.6.2.1.4b — Maximum forces and moments for use with Equation Set 1 to assess applied loads 6
9.6.2.1.4c — Maximum forces and moments for use with Equation Set 2 to assess applied loads 7
9.6.2.1.4d — Maximum forces and moments for use with Equation Set 3 to assess applied loads 8
9.6.2.1.4e — Maximum forces and moments for use with Equation Set 4 to assess applied loads 8
9.6.2.1.6.2.2 — ASME B73.1 metallic pump temperature and material adjustment values to be used on Table 9.6.2.1.4c values 10
9.6.2.2.4a — Equation Set 6 12
9.6.2.2.4b — Maximum forces and moments for use with Equation Set 6 to assess applied loads 13
9.6.2.2.4c — List of material specifications as used in Table 9.6.2.2.5.2 14
9.6.2.2.5.2 — ASME B73.2 metallic pump temperature and material adjustment values to be used on Section 9.6.2.2.4 values 15
9.6.2.3.3a — Maximum forces and moments for use with Equation Set 7 to assess applied loads based on hold-down bolts 18
9.6.2.3.3b — Maximum forces and moments for use with Equation Set 7 to assess applied loads based on nozzle stress 18
