

EFFECT OF THICKNESS ON THE TRANSFORMATION BEHAVIOR OF GRADE 91 STEEL

STP-PT-075

EFFECT OF THICKNESS ON THE TRANSFORMATION BEHAVIOR OF GRADE 91 STEEL

Prepared by:

Domenic Canonico
Canonico and Associates

Date of Issuance: June 30, 2015

This report was prepared as an account of work sponsored by ASME Pressure Technology Codes & Standards and ASME Standards Technology, LLC (ASME ST-LLC).

Neither ASME, ASME ST-LLC, the author, nor others involved in the preparation or review of this report, nor any of their respective employees, members or persons acting on their behalf, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness or usefulness of any information, apparatus, product or process disclosed, or represents that its use would not infringe upon privately owned rights.

Reference herein to any specific commercial product, process or service by trade name, trademark, manufacturer or otherwise does not necessarily constitute or imply its endorsement, recommendation or favoring by ASME ST-LLC or others involved in the preparation or review of this report, or any agency thereof. The views and opinions of the authors, contributors and reviewers of the report expressed herein do not necessarily reflect those of ASME ST-LLC or others involved in the preparation or review of this report, or any agency thereof.

ASME ST-LLC does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a publication against liability for infringement of any applicable Letters Patent, nor assumes any such liability. Users of a publication are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this publication.

TABLE OF CONTENTS

Foreword.....	iv
Abstract.....	v
1 Introduction.....	6
2 TEST METHODOLOGY.....	7
2.1 Coupon Tests – or Jominy bar.....	7
2.2 Building and Testing a Jominy Test Apparatus.....	7
2.3 Designing a Jominy Bar.....	8
2.4 Selecting Two Heats of Grade 91.....	10
2.5 Measuring the Cooling Curves.....	12
2.6 Continuing Jominy Tests on Two Bars from Each Heat.....	15
2.7 Preparing Photomicrographs at Five Locations.....	16
3 DISCUSSION OF THE RESULTS.....	27
References.....	30

List of Figures

Figure 2-1: Initial Test of Jominy Bar Apparatus.....	7
Figure 2-2: Desirable Conical Shape of Water during Quench.....	8
Figure 2-3: Thermocouple Locations, 0.25 in., 1.5 in., 2.5 in., and 3.75 in. from Quenched End of Jominy Bar.....	9
Figure 2-4: Individual Thermocouple (Chromel/Alumel) Embedded in Jominy Bar.....	9
Figure 2-5: Chemical Composition of Test Bar No. 1; Identified as “High Heat”.....	11
Figure 2-6: Chemical Composition of Test Bar No. 2; Identified as “Low Heat”.....	12
Figure 2-7: Cooling Curves for Five Thermocouples Embedded in Jominy Bars.....	13
Figure 2-8: Grade 91 CCT Diagram [2].....	13
Figure 2-9: Comparison of Cooling Rates from the First Study, Which Had a Failed Thermocouple at the 3.75 in. Location and the Successful Second Test.....	14
Figure 2-10: 1 st Run Austenitized at 1940°F.....	14
Figure 2-11: 2 nd Run Austenitized at 1940°F.....	15
Figure 2-12: Jominy Hardness Data for High Heat Test Bars 1-2 & 1-3 (WHI) and Low Heats Test Bars 2-2 & 2-3 (IBF).....	16
Figure 2-13: Microstructure at 0.25 in. from Quenched End; Austenitized (1940°F) and Cooled.....	17
Figure 2-14: Microstructure at 0.25 in. from Quenched End; Austenitized (1940°F) and Tempered (1410°F).....	18
Figure 2-15: Microstructure at 0.75 in. from Quenched End; Austenitized (1940°F) and Cooled.....	19
Figure 2-16: Microstructure at 0.75 in. from Quenched End; Austenitized.....	20
Figure 2-17: Microstructure at 1.5 in. from Quenched End; Austenitized (1940°F) and Cooled.....	21
Figure 2-18: Microstructure at 1.5 in. from Quenched End; Austenitized (1940°F) and Tempered (1410°F).....	22
Figure 2-19: Microstructure at 2.5 in. from Quenched End; Austenitized (1940°F) and Cooled.....	23
Figure 2-20: Microstructure at 2.5 in. from Quenched End; Austenitized (1940°F) and Tempered (1410°F).....	24
Figure 2-21: Microstructure at 3.75 in. from Quenched End; Austenitized (1940°F) and Cooled.....	25
Figure 2-22: Microstructure at 3.75 in. from Quenched End; Austenitized (1940°F) and Tempered (1410°F).....	26
Figure 3-1: Oak Ridge National Laboratory Jominy Test, Circa 1980 [4].....	28
Figure 3-2: Continuous Cooling Transformation Diagram for 9 Cr – 1 Mo: Austenitized at 1832°F.....	29

FOREWORD

This report evaluates the effect of thickness on the transformation behavior of Grade 91 steel alloy to further define the materials properties.

Established in 1880, the American Society of Mechanical Engineers (ASME) is a professional not-for-profit organization with more than 135,000 members and volunteers promoting the art, science and practice of mechanical and multidisciplinary engineering and allied sciences. ASME develops codes and standards that enhance public safety, and provides lifelong learning and technical exchange opportunities benefiting the engineering and technology community. Visit www.asme.org for more information.

ASME Standards Technology, LLC (ASME ST-LLC) is a not-for-profit Limited Liability Company, with ASME as the sole member, formed in 2004 to carry out work related to new and developing technology. ASME ST-LLC's mission includes meeting the needs of industry and government by providing new standards-related products and services, which advance the application of emerging and newly commercialized science and technology, and providing the research and technology development needed to establish and maintain the technical relevance of codes and standards. Visit www.stllc.asme.org for more information.
