BSI Standards Publication

# Environmental influence testing methodology for operational deployments of European ABC systems

**bsi.**

...making excellence a habit.™

### **National foreword**

This Published Document is the UK implementation of CEN/TS 16920:2016.

The UK participation in its preparation was entrusted to Technical Committee IST/44, Biometrics.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

TECHNICAL SPECIFICATION  
SPÉCIFICATION TECHNIQUE  
TECHNISCHE SPEZIFIKATION

**CEN/TS 16920**

March 2016

ICS 35.240.15

English Version

**Environmental influence testing methodology for  
operational deployments of European ABC systems**

Méthodologie de tests de l'influence environnementale  
pour les déploiements opérationnels des systèmes  
européens de contrôle de passages aux frontières  
automatisés

Testmethodik für Umwelteinflüsse beim  
operationellen Einsatz von europäischen ABC-  
Systemen

This Technical Specification (CEN/TS) was approved by CEN on 25 January 2016 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## **European foreword**

This document (CEN/TS 16920:2016) has been prepared by Technical Committee CEN/TC 224 “Personal identification and related personal devices with secure element, systems, operations and privacy in a multi sectorial environment”, the secretariat of which is held by AFNOR.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to announce this Technical Specification: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Introduction

This Technical Specification is focused on the application of the testing methodology defined in ISO/IEC 29197 for analysing the influence of environmental conditions on the biometric performance of European automatic border control (ABC) systems according to the features of these systems, the specificities of these systems for the European context and their intended operational environment, i.e. airports and port halls.

ABC systems are automated systems which can verify the identity of travellers crossing the borders at the border crossing points, without the need for human intervention. These systems are used by many European countries for supporting border control officer activities. Their objective is to improve border crossing processes and achieve consistent security levels throughout Europe. As a consequence, it is required that these systems conform to ISO/IEC standards for interoperability (see CEN/TS 16634:2014, Personal identification — Recommendations for using biometrics in European Automated Border Control, Clause 1). Among these standards, the multipart standard ISO/IEC 19795 “Biometric Performance Testing and Reporting” establishes requirements for planning, executing and reporting biometric performance evaluations. However, due to the fact that this set of standards does not cover the analysis of environmental conditions influence on biometric performance, ISO/IEC JTC1 SC37 WG5 began a new project for establishing a testing methodology to quantify those environmental effects. This project is ISO/IEC 29197 “Information technology — Evaluation methodology for environmental influence in biometric system performance”.

However, this methodology is generic and its requirements have been specified to cover the analysis of several environmental parameters (e.g. temperature, humidity, atmospheric pressure, illumination, noise, etc.) considering all possible operational environments. Depending on the particular features of the biometric system under test and the expected operational environment, those requirements should be particularized.

European ABC systems have biometric modules which have common and well-defined features.

Firstly, European ABC systems may use one or a combination of three biometric modalities: facial, fingerprint and iris (as it is specified by CEN/TS 16634:2014, Personal identification — Recommendations for using biometrics in European Automated Border Control, 4.1). Therefore, there are certain environmental conditions that affect such modalities to a greater extent according to ISO/IEC/TR 19795-3.

On the other hand, European ABC systems are localized in specific environments such as airports, railway stations and sea ports (as it is mentioned in CEN/TS 16634:2014, Personal identification — Recommendations for using biometrics in European Automated Border Control, 5.1.1). As a result, it is possible to predict which are going to be the surrounding environmental conditions of the ABC systems and to analyse whether the systems work properly or not for the possible values of such conditions. If the biometric performance of European ABC systems is affected by any environmental condition and this problem is not detected in early stages, it may cause negatively effects in future.

In addition, European ABC systems are subjected to privacy and data protection legislation (e.g. Directive 95/46/EC). Therefore, their analysis should comply with the limitations imposed by EU and data protection regulations (see CEN/TS 16634:2014, Personal identification— Recommendations for using biometrics in European Automated Border Control, 5.1.3.6 and 5.1.4).

Consequently and considering the importance to accurately check the correct behaviour of the biometric recognition functionality of European ABC systems in their expected host environment, it is essential to specify the general testing methodology addressed by ISO/IEC 29197 for the characteristics and needs of European ABC systems.

## 1 Scope

The purpose of this document is to specify the ISO/IEC 29197 testing methodology for European ABC systems. This specification will cover the following aspects:

- environmental conditions which influence biometric modalities used for European ABC systems, i.e. temperature, humidity, illumination and noise;
- different tests that can be defined regarding European ABC systems and the procedures for defining of the evaluation conditions to analyse per each test;
- particular characteristics of European ABC systems in accordance to best practice recommendations and privacy and data protection regulations for this kind of systems in case of European deployments.

As a consequence, the proposed document will include the following aspects:

- specific requirements for planning and executing environmental testing evaluations for European ABC systems based on ISO/IEC 29197 project and the best practices recommendations provided by CEN/TS 16634 Personal identification — Recommendations for using biometrics in European Automated Border Control document;
- recommendations for the selection of the possible tests according to the specific system that is going to be evaluated;
- specific requirements to establish and measure such evaluation conditions as well as to establish the baseline performance;
- a specification of the biometric performance evaluation including requirements for test population, test protocols, data to record and test results consistent with operational deployments of European ABC systems.
