

CGA G-4.15—2019

**VACUUM-JACKETED PIPING IN
LIQUID OXYGEN SERVICE**

FIRST EDITION

PREFACE

As part of a program of harmonization of industry standards, the Compressed Gas Association (CGA) has published CGA G-4.15, *Vacuum-Jacketed Piping in Liquid Oxygen Service*, jointly produced by members of the International Harmonization Council.

This publication is intended as an international harmonized standard for the worldwide use and application of all members of the Asia Industrial Gases Association (AIGA), Compressed Gas Association (CGA), European Industrial Gases Association (EIGA), and Japan Industrial and Medical Gases Association (JIMGA). Each association's technical content is identical, except for regional regulatory requirements and minor changes in formatting and spelling.

PLEASE NOTE:

The information contained in this document was obtained from sources believed to be reliable and is based on technical information and experience currently available from members of the Compressed Gas Association, Inc. and others. However, the Association or its members, jointly or severally, make no guarantee of the results and assume no liability or responsibility in connection with the information or suggestions herein contained. Moreover, it should not be assumed that every acceptable commodity grade, test or safety procedure or method, precaution, equipment or device is contained within, or that abnormal or unusual circumstances may not warrant or suggest further requirements or additional procedure.

This document is subject to periodic review, and users are cautioned to obtain the latest edition. The Association invites comments and suggestions for consideration. In connection with such review, any such comments or suggestions will be fully reviewed by the Association after giving the party, upon request, a reasonable opportunity to be heard. Proposed changes may be submitted via the Internet at our website, www.cganet.com.

This document should not be confused with federal, state, provincial, or municipal specifications or regulations; insurance requirements; or national safety codes. While the Association recommends reference to or use of this document by government agencies and others, this document is purely voluntary and not binding unless adopted by reference in regulations.

A listing of all publications, audiovisual programs, safety and technical bulletins, and safety posters is available via the Internet at our website at www.cganet.com. For more information contact CGA at Phone: 703-788-2700, ext. 799. E-mail: customerservice@cganet.com.

Work Item 15-111
Atmospheric Gases and Equipment Committee

NOTE—Appendix A (Informative) is for information only.

Contents	Page
1 Introduction.....	1
2 Scope and purpose	1
3 Definitions.....	1
4 General hazards and requirements.....	2
4.1 Oxygen hazards	2
4.2 Hazards and requirements for vacuum-jacketed piping systems in liquid oxygen service.....	2
5 Design	3
5.1 General vacuum-jacketed piping description.....	3
5.2 Vacuum-jacketed piping design considerations	5
6 Oxygen compatibility	14
6.1 Selection of materials	14
6.2 Cleaning	14
7 Fabrication, testing, quality assurance/quality control, and shipping	14
7.1 Fabrication, testing, and quality assurance/quality control requirements	15
7.2 Shipping requirements.....	15
7.3 Site installation	16
8 Operations and maintenance	16
8.1 General considerations.....	16
8.2 Inspection	17
8.3 Vacuum reading	18
8.4 Maintenance.....	18
8.5 Equipment isolation	18
8.6 Management of change.....	18
8.7 Protecting open systems when piping or piping components have been removed.....	19
8.8 System blowout after major maintenance	19
8.9 Change of service	19
9 References	19
10 Additional references.....	20
 Figures	
Figure 1a—Example of vacuum-jacketed piping—Cutaway view.....	4
Figure 1b—Example of vacuum-jacketed piping—Cutaway view.....	4
Figure 2—Example of a vacuum-jacketed piping run in service	5
Figure 3—Internal and external bellows.....	7
Figure 4a—Cutaway of a typical bayonet design.....	9
Figure 4b—Cutaway of a typical flange bayonet design	9
Figure 5—Example of a V-band clamp design.....	10
Figure 6—Example of a flanged connection	10
Figure 7—Typical vacuum field closure cutaway view	11
Figure 8—Example of a vacuum-jacketed riser	12
Figure 9—Examples of well supported bayonet connections	13
Figure 10—Examples of hangar and roller supports.....	14
Figure 11—Example of an iced bayonet connection.....	17
 Table
