PREFACE TO FIRST EDITION.

The subject of the Standardisation of Locomotives was first raised at a meeting of the Main Committee on January 14th, 1902, when Sir John Wolfe-Barry recorded interviews he had had with Lord George Hamilton and other officials of the India Office with regard to this subject, and it was agreed that evidence should be collected. On March 4th, 1902, the Main Committee sat to hear evidence on the subject, and this being in favour of proceeding, a Sectional Committee on Locomotives was formed under the Chairmanship of Sir Douglas Fox.

The Sectional Committee on Locomotives held their first meeting on May 30th, 1902, when the following Sub-Committees were formed:—

<i>Name.</i>	<i>Chairman.</i>
Locomotive Steel Plates	Mr. W. LORIMER.
Tyres, Axles, and Springs	Mr. W. LORIMER.
Copper and its Alloys	Mr. W. DEAN.
(Succeeded by Mr. J. F. MCINTOSH.)	

A number of meetings of the Sub-Committees have been held, and the Report in its present form was adopted by the Sectional Committee on Locomotives at their meeting held on March 23rd, 1906.

The Sectional Committee on Locomotives desire to place on record their appreciation of the services rendered by the Association of Railway Locomotive Engineers through their representatives on the Committee.

In many instances somewhat divergent opinions have had to be reconciled, and this has only been rendered possible by accepting the view that the Standard Specifications will be considered from time to time as occasion requires, and the Sectional Committee are desirous of making this point clear when submitting their Report.

To meet the various needs of the Home, Indian, and Colonial requirements, the Committee have in many cases included similar Specifications—one with, and the other without, a Chemical Analysis—in order that those who do not desire to specify a Chemical Analysis can still use a Standard Specification.
