About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC online collection - oc.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC online collection - oc.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

CONTENTS

FOREWORD.....	37
INTRODUCTION.....	39
1 Scope.....	41
1.1 General.....	41
1.2 Specifications	41
1.3 Conformance	41
2 Normative references	42
3 Terms, definitions, abbreviated terms, symbols and conventions	45
3.1 Referenced terms and definitions.....	45
3.1.1 ISO/IEC 7498-1 terms.....	45
3.1.2 ISO/IEC 8822 terms.....	45
3.1.3 ISO/IEC 8824-1 terms.....	45
3.1.4 ISO/IEC 9545 terms.....	45
3.2 Terms and definitions for decentralized periphery	46
3.3 Abbreviated terms and symbols	54
3.3.1 Abbreviated terms and symbols for media redundancy	54
3.3.2 Abbreviated terms and symbols for decentralized periphery.....	54
3.3.3 Abbreviated terms and symbols for services	58
3.3.4 Abbreviated terms and symbols for IEEE 802.1Q.....	58
3.3.5 Abbreviated terms and symbols for IETF RFC 2474.....	58
3.3.6 Abbreviated terms and symbols for IETF RFC 4291.....	58
3.4 Conventions.....	58
3.4.1 General concept	58
3.4.2 Conventions for decentralized periphery	58
3.4.3 Conventions used in state machines.....	67
4 Application layer protocol specification for common protocols.....	72
4.1 FAL syntax description.....	72
4.1.1 DLPDU abstract syntax reference	72
4.1.2 Data types	74
4.2 Transfer syntax.....	75
4.2.1 Coding of basic data types	75
4.2.2 Coding section related to common basic fields	83
4.3 Discovery and basic configuration.....	94
4.3.1 DCP syntax description	94
4.3.2 DCP protocol state machines.....	122
4.3.3 DLL Mapping Protocol Machines.....	139
4.4 Precision working time control	140
4.4.1 FAL syntax description	140
4.4.2 AP-Context state machine	151
4.4.3 FAL Service Protocol Machines	151
4.4.4 Application Relationship Protocol Machines.....	152
4.4.5 DLL Mapping Protocol Machines.....	215
4.5 Time synchronization	215
4.5.1 General	215
4.5.2 GlobalTime	216
4.5.3 WorkingClock	216
4.6 Media redundancy	217

4.6.1	Media redundancy and loop prevention.....	217
4.6.2	Seamless media redundancy	220
4.7	Real time cyclic.....	220
4.7.1	FAL syntax description	220
4.7.2	FAL transfer syntax	221
4.7.3	FAL Service Protocol Machines	231
4.7.4	Application Relationship Protocol Machines.....	231
4.7.5	DLL Mapping Protocol Machines.....	249
4.8	Real time acyclic.....	249
4.8.1	RTA syntax description	249
4.8.2	RTA transfer syntax.....	250
4.8.3	FAL Service Protocol Machines	254
4.8.4	Application Relationship Protocol Machines.....	254
4.8.5	DLL Mapping Protocol Machines.....	269
4.9	Fragmentation.....	269
4.9.1	General	269
4.9.2	FRAG syntax description	272
4.9.3	FRAG transfer syntax	273
4.9.4	FAL Service Protocol Machines	275
4.9.5	Application Relationship Protocol Machines.....	275
4.9.6	DLL Mapping Protocol Machines.....	275
4.10	Remote procedure call	286
4.10.1	General	286
4.10.2	RPC syntax description	286
4.10.3	RPC Transfer syntax	288
4.10.4	FAL Service Protocol Machines	304
4.10.5	Application Relationship Protocol Machines.....	304
4.10.6	DLL Mapping Protocol Machines.....	305
4.11	Link layer discovery	305
4.11.1	General	305
4.11.2	FAL common syntax description	305
4.11.3	LLDP transfer syntax	307
4.11.4	FAL Service Protocol Machines	317
4.11.5	Application Relation Protocol Machines	317
4.11.6	DLL Mapping Protocol Machines.....	317
4.12	Bridges and End Stations.....	317
4.12.1	General	317
4.12.2	Model	318
4.12.3	Traffic Shaping	333
4.12.4	Bridge extensions	334
4.12.5	QueueHandler	335
4.12.6	FAL Service Protocol Machines	335
4.12.7	Application Relation Protocol Machines	335
4.12.8	DLL Mapping Protocol Machines.....	335
4.13	IP suite	374
4.13.1	Overview	374
4.13.2	IP/UDP syntax description	374
4.13.3	IP/UDP transfer syntax	375
4.13.4	ARP.....	378

4.14	Domain name system.....	380
4.14.1	General	380
4.14.2	Primitive definitions	380
4.14.3	DNS state transition diagram	381
4.14.4	State machine description	381
4.14.5	DNS state table	381
4.14.6	Functions, Macros, Timers and Variables	381
4.15	Dynamic host configuration	381
4.15.1	General	381
4.15.2	Primitive definitions	382
4.15.3	DHCP state transition diagram.....	382
4.15.4	State machine description	382
4.15.5	DHCP state table	382
4.15.6	Functions, Macros, Timers and Variables	382
4.16	Simple network management	383
4.16.1	Overview	383
4.16.2	IETF RFC 1213-MIB	383
4.16.3	Enterprise number for PNIO MIB	383
4.16.4	MIB cross reference	384
4.16.5	Behavior in case of modular built bridges	384
4.16.6	LLDP EXT MIB	384
4.17	Common DLL Mapping Protocol Machines	384
4.17.1	Overview	384
4.17.2	Data Link Layer Mapping Protocol Machine	385
4.18	Additional definitions.....	390
5	Application layer protocol specification for decentralized periphery.....	390
5.1	FAL syntax description.....	390
5.1.1	DLPDU abstract syntax reference	390
5.1.2	APDU abstract syntax.....	390
5.2	Transfer syntax.....	409
5.2.1	Coding section related to BlockHeader specific fields	409
5.2.2	Coding section related to RTA-SDU specific fields.....	424
5.2.3	Coding section related to common address fields	429
5.2.4	Coding section related to AL services	445
5.2.5	Coding section related to ARVendorBlock.....	479
5.2.6	Coding section related to PNIOStatus.....	481
5.2.7	Coding section related to I&M Records	498
5.2.8	Coding section related to Alarm and Diagnosis PDUs	505
5.2.9	Coding section related to upload and retrieval	527
5.2.10	Coding section related to iParameter	527
5.2.11	Coding section related to Physical Device Interface Data	528
5.2.12	Coding section related to Physical Device Port Data.....	528
5.2.13	Coding section related to Physical Device IR Data.....	531
5.2.14	Coding section related to Physical Sync Data	554
5.2.15	Coding section related to Isochrone Mode Data	559
5.2.16	Coding section related to Physical Time Data	561
5.2.17	Coding section related to Media Redundancy	564
5.2.18	Coding section related to fiber optics	575
5.2.19	Coding section related to network components	577

5.2.20	Coding section related port statistic	578
5.2.21	Coding section related to fast startup.....	581
5.2.22	Coding section related to DFP	583
5.2.23	Coding section related to MRPD	587
5.2.24	Coding section related to auto configuration	588
5.2.25	Coding section related to controller to controller communication.....	591
5.2.26	Coding section related to system redundancy	592
5.2.27	Coding section related to energy saving	595
5.2.28	Coding section related to asset management.....	595
5.2.29	Coding section related to reporting system	600
5.2.30	Coding section related to Logbook.....	606
5.2.31	Coding section related to Time	607
5.2.32	Coding section related to Channel Related Process Alarm Reason.....	607
5.2.33	PDU checking rules	610
5.3	FAL protocol state machines.....	643
5.3.1	Overall structure	643
5.4	AP-Context state machine.....	645
5.5	FAL Service Protocol Machines	645
5.5.1	Overview	645
5.5.2	FAL Service Protocol Machine Device	645
5.5.3	FAL Service Protocol Machine Controller.....	654
5.6	Application Relationship Protocol Machines	665
5.6.1	Alarm Protocol Machine Initiator	665
5.6.2	Alarm Protocol Machine Responder	669
5.6.3	Device	673
5.6.4	Controller	756
5.7	DLL Mapping Protocol Machines.....	818
Annex A (normative)	Unified establishing of an AR for all RT classes	819
A.1	General.....	819
A.2	AR establishing.....	820
A.3	Startup of Alarm transmitter and receiver	825
Annex B (normative)	Compatible establishing of an AR.....	828
Annex C (informative)	Establishing of a device access AR.....	831
Annex D (informative)	Establishing of an AR (accelerated procedure).....	832
Annex E (informative)	Establishing of an AR (fast startup procedure).....	835
Annex F (informative)	Example of the upload, storage and retrieval procedure	837
Annex G (informative)	OSI reference model layers.....	839
Annex H (informative)	Overview of the IO controller and the IO device state machines	840
Annex I (informative)	Priority regeneration	842
Annex J (informative)	Overview of the PTCIP synchronization master hierarchy	843
Annex K (informative)	Optimization of bandwidth usage.....	845
Annex L (informative)	Time constraints for bandwidth allocation	847
Annex M (informative)	Time constraints for the forwarding of a frame	849
M.1	Principle	849
M.2	Forwarding.....	849
Annex N (informative)	Principle of dynamic frame packing	851
Annex O (informative)	Principle of Fragmentation	855

Annex P (informative) MRPD – Principle of seamless media redundancy	858
Annex Q (normative) Principle of a RED_RELAY without forwarding information in PDIRFrameData	860
Annex R (informative) Optimization for fast startup without autonegotiation	863
Annex S (informative) Example of a PrmBegin, PrmEnd and ApplRdy sequence	866
Annex T (informative) List of supported MIBs.....	867
Annex U (informative) Structure and content of BLOB.....	868
Annex V (normative) LLDP EXT MIB	869
Annex W (normative) Cross reference to the IEC 62439-2	887
W.1 Cross reference to the IEC 62439-2.....	887
W.1.1 General	887
W.1.2 Ring	887
W.1.3 Interconnection.....	888
Annex X (normative) Maintaining statistic counters for Ethernet.....	890
X.1 General.....	890
X.2 Counting model.....	890
X.3 Explanation of the IETF RFC defined statistic counters	892
X.4 Value range of the IETF RFC defined statistic counters	893
Bibliography.....	894

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL COMMUNICATION NETWORKS –
FIELDBUS SPECIFICATIONS –****Part 6-10: Application layer protocol specification –
Type 10 elements**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Attention is drawn to the fact that the use of the associated protocol type is restricted by its intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a layer protocol type to be used with other layer protocols of the same type, or in other type combinations explicitly authorized by its intellectual-property-right holders.

NOTE Combinations of protocol types are specified in IEC 61784-1 and IEC 61784-2.

International Standard IEC 61158-6-10 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This fourth edition cancels and replaces the third edition published in 2014. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) integration of system redundancy basic functionality;
- b) integration of dynamic reconfiguration basic functionality;
- c) integration of reporting system basic functionality;
- d) integration of asset management basic functionality; e) integration of media redundancy ring interconnection basic functionality.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
65C/948/FDIS	65C/956/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be:

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'color inside' logo on the cover page of this publication indicates that it contains colors which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a color printer.

INTRODUCTION

This document is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the “three-layer” fieldbus reference model described in IEC 61158-1.

The application protocol provides the application service by making use of the services available from the data-link or other immediately lower layer. The primary aim of this document is to provide a set of rules for communication expressed in terms of the procedures to be carried out by peer application entities (AEs) at the time of communication. These rules for communication are intended to provide a sound basis for development in order to serve a variety of purposes:

- as a guide for implementers and designers;
- for use in the testing and procurement of equipment;
- as part of an agreement for the admittance of systems into the open systems environment;
- as a refinement to the understanding of time-critical communications within OSI.

This document is concerned, in particular, with the communication and interworking of sensors, effectors and other automation devices. By using this document together with other standards positioned within the OSI or fieldbus reference models, otherwise incompatible systems may work together in any combination.

NOTE Attention is drawn to the fact that use of the associated protocol type(s) is restricted by its (their) intellectual-property-right holder(s). In all cases, the commitment to limited release of intellectual-property-rights made by the holder(s) of those rights permits a particular data-link layer protocol type to be used with physical layer and application layer protocols in type combinations as specified explicitly in the IEC 61784 series. Use of the protocol type(s) in other combinations may require permission of their respective intellectual-property-right holder(s).

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent concerning Type 10 elements and possibly other types given in this document as follows:

The following patent rights for Type 10 have been announced by [SI]:

Publication	Title
WO 02/043336	System and method for parallel transfer of real-time critical and non-real-time critical data via switchable data networks, particularly Ethernet
WO 02/076033	Synchronous clocked communication system with decentralized input/output modules and methods for integrating decentralized input/output modules in such a system
WO 03/028258	Method for synchronizing nodes of a communication system
WO 03/028259	Communications system and method for synchronizing a communications cycle
WO 04/030284	Method for permanent redundant transmission of data telegrams in communication systems
EP 1558002	Method for assigning an IP address to a device
EP 1318630	Matrices for controlling the device specific data transfer rates on a field bus

IEC takes no position concerning the evidence, validity and scope of these patent rights.

The holder of these patent rights has assured the IEC that he/she is willing to negotiate licences either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC. Information may be obtained from:

[SI]: Siemens AG
LC TE IP&IT

Otto-Hahn-Ring 6
D-81739 Munich
Germany

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. IEC shall not be held responsible for identifying any or all such patent rights.

ISO (www.iso.org/patents) and IEC (http://www.iec.ch/tctools/patent_decl.htm) maintain on-line data bases of patents relevant to their standards. Users are encouraged to consult the data bases for the most up to date information concerning patents.

INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

Part 6-10: Application layer protocol specification – Type 10 elements

1 Scope

1.1 General

The Fieldbus Application Layer (FAL) provides user programs with a means to access the fieldbus communication environment. In this respect, the FAL can be viewed as a “window between corresponding application programs.”

This part of IEC 61158 provides common elements for basic time-critical and non-time-critical messaging communications between application programs in an automation environment and material specific to Type 10 fieldbus. The term “time-critical” is used to represent the presence of a time-window, within which one or more specified actions are required to be completed with some defined level of certainty. Failure to complete specified actions within the time window risks failure of the applications requesting the actions, with attendant risk to equipment, plant and possibly human life.

This International Standard defines in an abstract way the externally visible behavior provided by the Type 10 fieldbus application layer in terms of:

- a) the abstract syntax defining the application layer protocol data units conveyed between communicating application entities,
- b) the transfer syntax defining the application layer protocol data units conveyed between communicating application entities,
- c) the application context state machine defining the application service behavior visible between communicating application entities, and
- d) the application relationship state machines defining the communication behavior visible between communicating application entities.

The purpose of this document is to define the protocol provided to:

- a) define the wire-representation of the service primitives defined in IEC 61158-5-10 and
- b) define the externally visible behavior associated with their transfer.

This document specifies the protocol of the Type 10 fieldbus application layer, in conformance with the OSI Basic Reference Model (ISO/IEC 7498-1) and the OSI Application Layer Structure (ISO/IEC 9545).

1.2 Specifications

The principal objective of this document is to specify the syntax and behavior of the application layer protocol that conveys the application layer services defined in IEC 61158-5-10.

A secondary objective is to provide migration paths from previously-existing industrial communications protocols. It is this latter objective which gives rise to the diversity of protocols standardized in IEC 61158-6.

1.3 Conformance

This document does not specify individual implementations or products, nor does it constrain the implementations of application layer entities within industrial automation systems.
