

BSI Standards Publication

Space engineering — Structural materials handbook

Part 4: Integrity control, verification guidelines and manufacturing

National foreword

This Published Document is the UK implementation of CEN/TR 17603-32-04:2022.

The UK participation in its preparation was entrusted to Technical Committee ACE/68, Space systems and operations.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

This publication is not to be regarded as a British Standard.

TECHNICAL REPORT

CEN/TR 17603-32-04

RAPPORT TECHNIQUE

TECHNISCHER BERICHT

January 2022

ICS 49.140

English version

Space engineering - Structural materials handbook - Part 4: Integrity control, verification guidelines and manufacturing

Ingénierie spatiale - Manuel des matériaux structuraux
- Partie 4 : Contrôle de l'intégrité, directives de
vérification et fabrication

Raumfahrttechnik - Handbuch der Strukturwerkstoffe -
Teil 4: Integritätskontrolle, Verifizierungsrichtlinien
und Herstellung

This Technical Report was approved by CEN on 22 November 2021. It has been drawn up by the Technical Committee CEN/CLC/JTC 5.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Rue de la Science 23, B-1040 Brussels**

Table of contents

European Foreword	26
Introduction	27
33 Aspects of damage tolerance	28
33.1 Introduction.....	28
33.1.1 Damage tolerance.....	28
33.1.2 Damage events.....	28
33.1.3 Damage tolerance criteria.....	28
33.2 General guidelines.....	29
33.2.1 Fracture control.....	29
33.2.2 Durability.....	29
33.2.3 Damage.....	29
33.2.4 Defects in composites.....	29
33.2.5 Impact damage.....	32
33.3 Damage tolerance criteria.....	33
33.3.1 General.....	33
33.3.2 Load paths.....	34
33.3.3 Environment.....	34
33.3.4 Damage.....	34
33.3.5 Residual strength.....	35
33.3.6 Safe-life.....	35
33.3.7 Fail-safe.....	35
33.3.8 Stiffness.....	35
33.3.9 Loads.....	35
33.3.10 Environmental factors.....	35
33.3.11 Inspection.....	35
33.3.12 Summary.....	36
33.4 Defect standardisation.....	36
33.4.1 General.....	36
33.4.2 Types of defects.....	37
33.5 Effect of macroscopic defects on static load.....	39

33.5.1	Composite failure	39
33.5.2	Use of fracture mechanics.....	39
33.5.3	Multi-angle laminates	39
33.6	Test and analysis.....	40
33.6.1	General.....	40
33.6.2	Constituent tests	42
33.6.3	Lamina tests.....	43
33.6.4	Laminate tests.....	43
33.6.5	Structural element and component tests	43
33.6.6	Structural sub-component or full-scale tests.....	43
33.6.7	Delamination	43
33.7	Other features of damage-tolerance design.....	45
33.7.1	Acoustic fatigue.....	45
33.7.2	Proof testing.....	45
33.7.3	Metallic parts.....	45
33.7.4	Thermal and meteoroid protection system	45
33.7.5	Impact dynamics – crashworthiness.....	45
33.7.6	Flammability, toxicity and off-gassing.....	45
33.7.7	Lightning protection.....	46
33.8	Improving damage tolerance with higher toughness laminates	46
33.8.1	General.....	46
33.8.2	Material-related aspects.....	46
33.8.3	Lay-up aspects.....	47
33.9	References	47
33.9.1	General.....	47
33.9.2	ECSS documents.....	48
33.9.3	MIL standards	48
34	Inspection and quality assurance	49
34.1	Introduction.....	49
34.2	Fabrication and quality assurance	49
34.2.1	Quality assurance	49
34.3	Inspection, maintenance and repair.....	50
34.3.1	Inspection and maintenance	50
34.3.2	Repairs	51
34.4	Inspection	51
34.4.1	Basic considerations	51
34.5	Definition of inspection procedures.....	52

34.5.1	Procedures	52
34.5.2	Thin composite laminates.....	53
34.5.3	Thick composite laminates	53
34.6	Non-destructive inspection techniques.....	54
34.6.1	Introduction	54
34.6.2	Damage tolerant designs	54
34.6.3	Advances in NDT	54
34.6.4	Techniques	55
34.6.5	Smart technologies for condition monitoring.....	56
34.7	Defects and anomalies for detection	56
34.7.1	General	56
34.7.2	Emphasis of NDT development.....	57
34.8	Overview of NDT techniques	57
34.8.1	Selection of NDT technique.....	57
34.8.2	Detection of defects	58
34.9	Traditional contact NDT techniques	64
34.9.1	General	64
34.9.2	Visual inspection	64
34.9.3	Dye penetrant	64
34.9.4	Magnetic particle	64
34.9.5	Mechanical resonance or impedance	64
34.10	Ultrasonic techniques	65
34.10.1	Introduction	65
34.10.2	Modes of examination	66
34.10.3	Ultrasonic signal presentation	66
34.10.4	Data and image processing.....	66
34.10.5	Equipment calibration.....	67
34.10.6	Large area scanning	67
34.10.7	Acousto-ultrasonics.....	68
34.10.8	Lamb wave (guided wave)	69
34.10.9	Rayleigh wave techniques.....	70
34.10.10	Backscattering techniques.....	70
34.10.11	Transducer technology	71
34.10.12	Air-coupled techniques (non-contact)	74
34.11	Acoustic emission.....	77
34.12	Laser ultrasonics	78
34.12.1	General	78

34.12.2 Basic principles	79
34.13 Holography	80
34.13.1 Introduction	80
34.13.2 Laser interferometric techniques	81
34.13.3 Vibration, pressure and thermal loading	82
34.13.4 Electronic imaging	82
34.13.5 Examination of space structures	83
34.14 Laser shearography	84
34.14.1 Introduction	84
34.14.2 Basic technique	84
34.14.3 Characteristics of shearography	85
34.15 Thermography	86
34.15.1 Introduction	86
34.15.2 Techniques	87
34.15.3 Heat sources and pulse duration	91
34.15.4 Detection capabilities	91
34.15.5 Limitations of thermography	92
34.16 X-ray radiography	93
34.16.1 Introduction	93
34.16.2 X-ray techniques	94
34.16.3 Digital radiographic system developments	95
34.16.4 Defect resolution	98
34.17 Computer tomography	98
34.17.1 Introduction	98
34.17.2 Basic technique	98
34.17.3 Attributes of CT scanning	99
34.17.4 Micro-tomography	100
34.18 Eddy currents	100
34.18.1 Introduction	100
34.18.2 Developments in eddy current techniques	101
34.19 Other NDT techniques	102
34.19.1 General	102
34.19.2 Microwave	103
34.19.3 Heat and photosensitive agents	103
34.19.4 Electrical impedance	103
34.19.5 Acoustic microscopy	103
34.19.6 Nuclear magnetic resonance (NMR)	104

34.19.7 Neutron radiography	104
34.19.8 Gamma radiography	104
34.19.9 D sight - Diffracto sight.....	104
34.20 NDT for adhesive bond defects.....	105
34.20.1 General.....	105
34.20.2 Disbonds, voids and porosity	105
34.20.3 Cohesion and adhesion	106
34.21 NDT for space applications.....	106
34.21.1 Introduction	106
34.21.2 Developments in inspection	107
34.21.3 Summary of NDT techniques	107
34.22 Rupture tests	109
34.22.1 Application	109
34.23 Test related items	110
34.23.1 General.....	110
34.23.2 Major items	110
34.23.3 Qualification tests.....	111
34.24 Structural test reports	122
34.25 Analysis and test documents	123
34.26 References	125
34.26.1 General.....	125
34.26.2 ECSS documents.....	137
35 Objective of verification	138
35.1 Introduction.....	138
35.1.1 General.....	138
35.1.2 Composite structures	138
35.1.3 Composite materials	138
36 Procurement specifications for raw materials	140
36.1 Introduction.....	140
36.1.1 Guidelines.....	140
36.2 Specification methods.....	140
36.2.1 Fiche sheet principle	140
36.2.2 Specific material specification	141
36.3 Guidelines on resin procurement	141
36.3.1 Scope.....	141
36.3.2 Basic information to be provided by the supplier	142
36.4 Guidelines on carbon and other fibre prepreg procurement	146

36.4.1	Scope.....	146
36.4.2	Description and classification of prepreg	146
36.4.3	Prepreg characteristics for qualification and batch testing	147
36.4.4	Laminate Characteristics.....	150
36.4.5	Test methods	151
36.5	References	152
36.5.1	ECSS documents.....	152
36.5.2	ESA publications	152
37	Philosophy of assessment of design allowables	153
37.1	Introduction.....	153
37.2	Carbon fibre reinforced plastics	153
37.2.1	Design values	153
37.3	Definition of design allowables.....	154
37.3.1	'A' basis allowable	154
37.3.2	'B' basis allowable	154
37.4	Development procedure.....	154
37.5	Test data	154
37.5.1	Material	154
37.5.2	Data	155
37.6	References	159
37.6.1	General.....	159
38	Manufacturing techniques	160
38.1	Introduction.....	160
38.1.1	Processing techniques	160
38.1.2	Process selection	160
38.2	Process selection criteria	161
38.3	Hand lay-up	161
38.3.1	General	161
38.3.2	Wet lamination	162
38.3.3	Prepreg lay-up	165
38.4	Autoclave moulding	169
38.4.1	Use	169
38.4.2	Basic process.....	169
38.4.3	Bag moulding methods	170
38.4.4	Features of bag moulding.....	173
38.4.5	Bagging techniques.....	174
38.4.6	Tool materials	175

38.4.7	Cure schedules	177
38.5	Filament winding.....	178
38.5.1	Basic process.....	178
38.5.2	Applications.....	178
38.5.3	Winding process	179
38.5.4	Mandrels	180
38.5.5	Sandwich constructions	180
38.5.6	Tape winding.....	181
38.6	Filament-winding machines	181
38.6.1	General	181
38.6.2	Polar winding	181
38.6.3	Helical winding	183
38.7	Resin transfer moulding	184
38.7.1	General	184
38.7.2	Basic process.....	184
38.7.3	Applications.....	185
38.7.4	Fibre preforms.....	185
38.7.5	Resin injection.....	186
38.7.6	Process variables.....	187
38.7.7	Process advantages.....	187
38.8	Pultrusion	188
38.8.1	Use	188
38.8.2	Basic process.....	188
38.8.3	Pull-forming.....	189
38.9	Table rolling	189
38.9.1	Tubular sections.....	189
38.10	Pressure and mechanical forming.....	190
38.10.1	General.....	190
38.10.2	Fibre metal laminates.....	190
38.10.3	Thermoplastic composites.....	190
38.11	Injection moulding.....	191
38.11.1	General	191
38.11.2	Short fibre composites	191
38.12	Radiation curing.....	192
38.12.1	Process developments.....	192
38.12.2	EB electron beam curing	193
38.12.3	Microwave.....	197

38.12.4 UV curing	198
38.13 Preform technology.....	198
38.13.1 General.....	198
38.13.2 Braids.....	199
38.13.3 Commingled fibre performs	199
38.14 Fibre placement.....	200
38.14.1 Introduction	200
38.14.2 Advantages	203
38.14.3 Repeatability in lay-up and properties	204
38.14.4 Mixed materials in the same lay-up	205
38.14.5 Major advantages of fibre placement compared with other technologies.....	206
38.14.6 Examples of European launcher and satellite structures made by fibre placement	207
38.15 Out of autoclave	208
38.15.1 Introduction	208
38.15.2 Aerospace structural parts	208
38.15.3 Composite materials	209
38.15.4 Tooling	209
38.16 References	210
38.16.1 General.....	210
38.16.2 ECSS standards	216
39 Machining techniques	217
39.1 Introduction.....	217
39.2 Basic rules	217
39.2.1 General.....	217
39.2.2 Equipment.....	217
39.3 Routing.....	218
39.3.1 Carbon/epoxy composites.....	218
39.3.2 Aramid/epoxy composites	218
39.3.3 Trimming and bevelling	219
39.4 Sanding	220
39.4.1 General.....	220
39.4.2 Fit or trim.....	220
39.4.3 Bonding.....	221
39.4.4 Aramid/epoxy composites	222
39.5 Sawing.....	222
39.5.1 Basic rules	222

39.5.2	Bandsawing	222
39.5.3	Circular sawing	223
39.5.4	Sabre sawing	224
39.6	Countersinking.....	225
39.6.1	General.....	225
39.6.2	Carbon and glass reinforced epoxy.....	225
39.6.3	Aramid/epoxy composites	225
39.7	Counterboring.....	226
39.8	Milling	227
39.8.1	Basic Rules.....	227
39.8.2	Plunge-cut milling.....	227
39.9	Drilling	228
39.9.1	Basic problems	228
39.9.2	Drill bits for composites	229
39.10	Orbital drilling.....	231
39.10.1	Introduction	231
39.10.2	Advantages.....	232
39.10.3	Drilling parameters.....	232
39.10.4	Equipment.....	232
39.10.5	Application examples	233
39.11	References	234
39.11.1	General.....	234
39.11.2	ECSS standards	234
40	Manufacturing costs.....	235
40.1	Introduction.....	235
40.2	Cost drivers	236
40.2.1	General.....	236
40.2.2	Project cost drivers.....	236
40.2.3	Mass for cost budgets	236
40.2.4	Materials selection	236
40.2.5	Design for manufacturing	237
40.2.6	Manufacturing expertise.....	237
40.2.7	Tooling and consumables	237
40.2.8	Processing times.....	237
40.2.9	Labour costs	238
40.2.10	Part count	238
40.2.11	Unit numbers.....	238

40.2.12	Product life and sourcing.....	239
40.3	Cost optimisation	239
40.3.1	Load-carrying structures.....	239
40.4	Cost advantages of composites	244
40.4.1	Material costs.....	244
40.4.2	Manufacturing costs	244
40.5	Satellite thrust cylinders	244
40.6	Launcher fairing cylinders	245
40.6.1	General.....	245
40.6.2	Potential fairing designs	245
40.6.3	Selection of designs	249
40.6.4	Process and material trade-off	250
40.7	Thermoplastic versus thermoset.....	252
40.7.1	General.....	252
40.7.2	Recurring spacecraft components.....	253
40.7.3	Thermoplastic composites in aircraft.....	258
40.7.4	Conclusions	260
40.8	Automation	260
40.9	Cost analysis methods.....	261
40.10	References	261
40.10.1	General.....	261
41	Repair of composites	263
41.1	Introduction.....	263
41.2	Damage classification.....	263
41.2.1	Life-histories of composite structures	263
41.2.2	Inspection and criticality of damage	263
41.2.3	Repair zones.....	264
41.3	Damage categories.....	264
41.3.1	Impact energy levels	264
41.3.2	Damage types.....	265
41.4	Basic repair concepts	268
41.4.1	General.....	268
41.4.2	Basic types of repairs.....	268
41.4.3	Repair selection	268
41.5	Flush repair concepts	270
41.5.1	Applications.....	270
41.5.2	Post-repair properties.....	270

41.5.3	Design.....	270
41.5.4	Manufacture.....	270
41.6	Bonded external repair concepts	271
41.6.1	Applications.....	271
41.6.2	Post-repair properties.....	271
41.6.3	Design.....	271
41.6.4	Manufacture	272
41.7	Bolted external repair concepts.....	272
41.7.1	Applications.....	272
41.7.2	Post-repair properties.....	273
41.7.3	Design.....	273
41.7.4	Manufacture	273
41.8	Sandwich structure repair concepts	274
41.8.1	No core damage	274
41.8.2	Core damage	274
41.8.3	Manufacture	274
41.9	References	275
41.9.1	General.....	275
42	Basic characteristics of new advanced materials	277
42.1	Introduction.....	277
42.2	Material groups.....	277
42.2.1	Metallic materials	277
42.2.2	Ceramic materials	278
42.2.3	Material classification	278
42.3	Features of alloys and metal matrix composites	280
42.3.1	Structural alloys	280
42.3.2	Properties	281
42.3.3	Material developments	281
42.3.4	Effects of reinforcements.....	282
42.3.5	Processing	282
42.4	Features of ceramic and inorganic composites	283
42.4.1	Features.....	283
42.4.2	Properties	284
42.4.3	High-temperature use	284
42.5	High temperature and interface phenomena	285
42.5.1	Effects of processing temperature.....	285
42.5.2	High-temperature applications	286

European Foreword

This document (CEN/TR 17603-32-04:2022) has been prepared by Technical Committee CEN/CLC/JTC 5 "Space", the secretariat of which is held by DIN.

It is highlighted that this technical report does not contain any requirement but only collection of data or descriptions and guidelines about how to organize and perform the work in support of EN 16603-32.

This Technical report (CEN/TR 17603-32-04:2022) originates from ECSS-E-HB-32-20 Part 4A.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document has been developed to cover specifically space systems and has therefore precedence over any TR covering the same scope but with a wider domain of applicability (e.g.: aerospace).

Introduction

The Structural materials handbook is published in 8 Parts.

A glossary of terms, definitions and abbreviated terms for these handbooks is contained in Part 8.

The parts are as follows:

TR 17603-32-01	Part 1	Overview and material properties and applications	Clauses 1 - 9
TR 17603-32-02	Part 2	Design calculation methods and general design aspects	Clauses 10 - 22
TR 17603-32-03	Part 3	Load transfer and design of joints and design of structures	Clauses 23 - 32
TR 17603-32-04	Part 4	Integrity control, verification guidelines and manufacturing	Clauses 33 - 45
TR 17603-32-05	Part 5	New advanced materials, advanced metallic materials, general design aspects and load transfer and design of joints	Clauses 46 - 63
TR 17603-32-06	Part 6	Fracture and material modelling, case studies and design and integrity control and inspection	Clauses 64 - 81
TR 17603-32-07	Part 7	Thermal and environmental integrity, manufacturing aspects, in-orbit and health monitoring, soft materials, hybrid materials and nanotechnologies	Clauses 82 - 107
TR 17603-32-08	Part 8	Glossary
