About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC - webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

REQUIREMENTS FOR HOUSEHOLD ELECTRICITY SUPPLY**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63318 has been prepared by IEC systems committee LVDC: Low voltage direct current and low voltage direct current for electricity access. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
SyCLVDC/104/CDV	SyCLVDC/118/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

"ESMAP" and the "Energy Sector Management Assistance Program" are proprietary names of the World Bank, which has neither endorsed nor sponsored IEC 63318. These proprietary names are provided for reasons of public interest or public safety. This information is given for the convenience of users of this document and does not constitute an endorsement by IEC.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

0.1 Electricity access initiatives

Access to electricity still remains a major challenge for a significant percentage of the human population. It is a key enabler of socio-economic development. United Nations' (UN) Sustainable Development Goal 7 attempts to "Ensure access to affordable, sustainable, reliable and modern energy for all" and a time-bound target for delivery is specifically stated in Target 7.1 which declares that "By 2030, ensure universal access to affordable, reliable and modern energy services".

The UN also recognises that access to energy is not just limited to an electricity supply connection, but rather the usability is indispensable and has mandated that such usability of the energy supply supporting energy access needs to have several technology-neutral attributes: it needs to be adequate in quantity, available when needed, of good quality, reliable, convenient, affordable, legal, healthy, and safe. In addition, the SE4ALL initiative under the UN delivering the SDG-7 goals has established a Multi-Tier framework which includes these attributes not just for quantifying access but also providing a basis for scaling electricity availability.

In addition, Target 7.2 declares that "By 2030, increase substantially the share of renewable energy in the global energy mix" and Target 7.3 states that "By 2030, double the global rate of improvement in energy efficiency". It is therefore obvious that technology is going to be the main driver for delivery of Target 7.2 and 7.3. While the Multi-Tier Framework attempts to be technology-agnostic, the delivery of the afore-mentioned targets ensures that technology cannot be ignored.

0.2 Motivation

The IEC is an advocate of safe electricity supply and has helped to ensure affordable and sustainable electricity supply through its multiple standards. Standards ensure delivery of an electrical eco-system that is well understood in the marketplace, provides acceptable level of service and availability, ensures sustainability and at the same time enables affordability through competing products in the market place and economies of scale.

Standards are applied in many countries throughout the world. IEC International Standards are used routinely in legislation and regulation and are used to support public policy initiatives.

0.3 IEC's role and philosophy

Considering IEC's role as a standards developer with experts in standards and technology, it is imperative that IEC present a framework for electricity access which will provide a set of minimal requirements that ensure that all the attributes associated with electricity supply are addressed. This will help in adoption of solutions that are affordable, scalable and sustainable besides providing support for legislation and regulation. It is hoped that this will also help with investments in this sector to enable delivery of the targets faster than envisioned.

From a standards perspective, the technical committees of IEC are responsible for preparing the required standards. However, a broader solution such as the delivery of energy access based on the Multi-Tier framework is beyond the scope of a single committee within IEC and needs a systems committee to work with technical committees and create a Systems Reference Deliverable which will draw upon the standards of multiple technical committees and call out those particular aspects of a standard that are relevant to a related use case. The resulting document will reflect the accumulated expertise of all the relevant technical committees but restricted to specific use cases. This will help in identifying gaps and creating standards enabling delivery and future amendments easier and faster.

This document is framed in such a manner to include renewable energy and enable higher energy efficiency by adopting a purely DC-based approach rather than conventional AC-based approaches for power delivery and therefore this document will also address Target 2 and Target 3 of SDG-7 goals. With the use of distributed energy sources such as photovoltaics and wind, DC power is naturally made available and loads are increasingly DC based (e.g. LED lamps and TVs). Further, storage using batteries is also inherently DC. Enabling the interconnection of DC sources, storage and loads driven with DC power using a purely DC-based system is a natural and efficient alternative to conventional AC-based approaches. A pure DC-based approach can be deployed much faster, is scalable and can be easily integrated into the utility grid infrastructure when it eventually becomes available.

IEC is constantly developing standards that respond to market needs. This document collates all the relevant standards from IEC technical committees and subcommittees in a coherent manner. This document provides international funding agencies with a reference International Standard, which is a critical need for developing economies struggling with electricity access.

SPECIFICATIONS FOR SELV DC SYSTEMS CONFORMING TO THE ESMAP MULTI-TIER FRAMEWORK TIER 2 AND TIER 3 REQUIREMENTS FOR HOUSEHOLD ELECTRICITY SUPPLY

1 Scope

This document specifies electrical systems that are intended to be used for electricity access and not connected to a public network such as product kits up to 35 V DC as specified in IEC 62257-9-5 and IEC 62257-9-8 for Tier 2 of the ESMAP Multi-Tier Framework for household electricity supply; and/or 48 V DC fixed installations, for Tier 3 of the ESMAP Multi-Tier Framework for household electricity supply.

This document applies to Tier 2 and Tier 3 installations using SELV DC systems.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60364 (all parts), *Low-voltage electrical installations*

IEC 60364-4-43, *Low-voltage electrical installations – Part 4-43: Protection for safety – Protection against overcurrent*

IEC 60445, *Basic and safety principles for man-machine interface, marking and identification – Identification of equipment terminals, conductor terminations and conductors*

IEC 60884-2-4, *Plugs and socket-outlets for household and similar purposes – Part 2-4: Particular requirements for plugs and socket-outlets for SELV*

IEC 60906-3, *IEC System of plugs and socket-outlets for household and similar purposes – Part 3: SELV plugs and socket-outlets, 16 A 6 V, 12 V, 24 V, 48 V, a.c. and d.c.*

IEC 61056-1, *General purpose lead-acid batteries (valve-regulated types) – Part 1: General requirements, functional characteristics – Methods of test*

IEC TS 61200-101, *Electrical installation guide – Part 101: Application guidelines on extra low-voltage direct current electrical installations not intended to be connected to a public distribution network*

IEC 61215 (all parts), *Terrestrial photovoltaic (PV) modules – Design qualification and type approval*

IEC 61427-1, *Secondary cells and batteries for renewable energy storage – General requirements and methods of test – Part 1: Photovoltaic off-grid application*

IEC 61951-2, *Secondary cells and batteries containing alkaline or other non acid electrolytes – Secondary sealed cells and batteries for portable applications – Part 2: Nickel-metal hydride*
